Fact Sheet: G550 - Airborne Early Warning - Updated 23 Feb 2012 for the Singapore Airshow 2012

23 Apr 2007

The Republic of Singapore Air Force (RSAF) acquired the Gulfstream 550 - Airborne Early Warning (G550-AEW) in 2007 to replace the RSAF's E-2C AEW that had served the Air Force for more than 20 years.

The G550-AEW enhances the RSAF's air situation awareness and its identification capability as part of the networked air defence system. The advanced airborne early warning capabilities offered by the G550-AEW aircraft provides improved surveillance for the RSAF, and enhances Singapore's air defence capability. The G550-AEW operates with the Air Defence and Operations Command (ADOC) during missions.

The G550-AEW is equipped with a sophisticated mission suite that includes an Active Electronically Scanned Array (AESA) radar to detect, identify and track aerial targets. The G550-AEW aircraft has a detection range of more than 200 nautical miles to enable the RSAF to see farther and respond more effectively to various operational situations.
